What is a SitRep used for?

SitRep is a military term for a situation report. A sitrep is a clear, structured, and concise way to share information in a standardized format. In PubSafe, every user is a real-time data node. The more information shared, the better the information for those responding. Sharing that nothing is going on in your area is just as important as a flood or down powerline somewhere else. Responders know where and what to allocate to the response with good information. Post lots of SitReps as you move around and see what is happening. Include photos or a short video to really give people confidence in what you are reporting.
